Python Functions · Step 1 of 5

■ Python

Concept

What is a Function?

A reusable block of code that performs one task.

```
def keyword greet name(paramname):  
    return f"Hello, {name}!"
```

Functions prevent repetition. Call them by name:

```
result = greet("Alex")  
# result = 'Hello, Alex!'
```

You'll practise writing this yourself in the next step.

Python Functions · Step 3 of 5

— Fill-in-Blank

Complete the function definition

Type or select the missing keyword to make this work.

```
def add(a, b):  
    return a + b
```

Choose the correct keyword:

def

class

fun

return

■ Correct! 'def' declares a function.

+10 XP

■ Not quite — think about what keyword declares a function.

Final step of a skill: 4-question MCQ. Pass to earn XP and mark skill complete

Python Functions · Step 5 of 5 — Quiz

Question 2 of 4

What does this code output?

```
def double (n): return n * 2
print (double(5))
```

A 5

B 10

C 25

Submit Answer →

■ Skill Complete! Python Functions

You scored 4/4 · +150 XP · Badge: 'Function Master' unlocked ■
